SUPPLY CHAIN MANAGEMENT

Inland terminal receives coal from supplier (Mining) thru truck / rail , stockpile based on the (coal product type and customer) within yard and export to customer thru rail / road. Manage Road-> Rail , Rail -> Rail, Rail -> Truck

UNDERSTANDING OF CONTEXT

Inland terminal receives coal from supplier (Mining) thru truck / rail , stockpile based on the (coal product type and customer) within yard and export to customer thru rail / road. Manage Road-> Rail , Rail -> Rail, Rail -> Truck

CHALLENGES

Key Challenges

- Load data integrity
- Visibility of supply chain
- Coal grades integrity
- Stockpile integrity
- Operational efficiency
- Lack of collaboration

The solutions should offer significant system and process improvements such as

- **single source of truth;**
- **automate functions** where possible to reduce resource needs;
- **manage by exceptions** for bare minimum manual intervention;
- **automate data transfer** using standard mechanism which will significantly reduce manual errors and lastly provide
- **management reporting and dashboard** to the business for accurate monitoring of the terminal operation in a near real time basis.

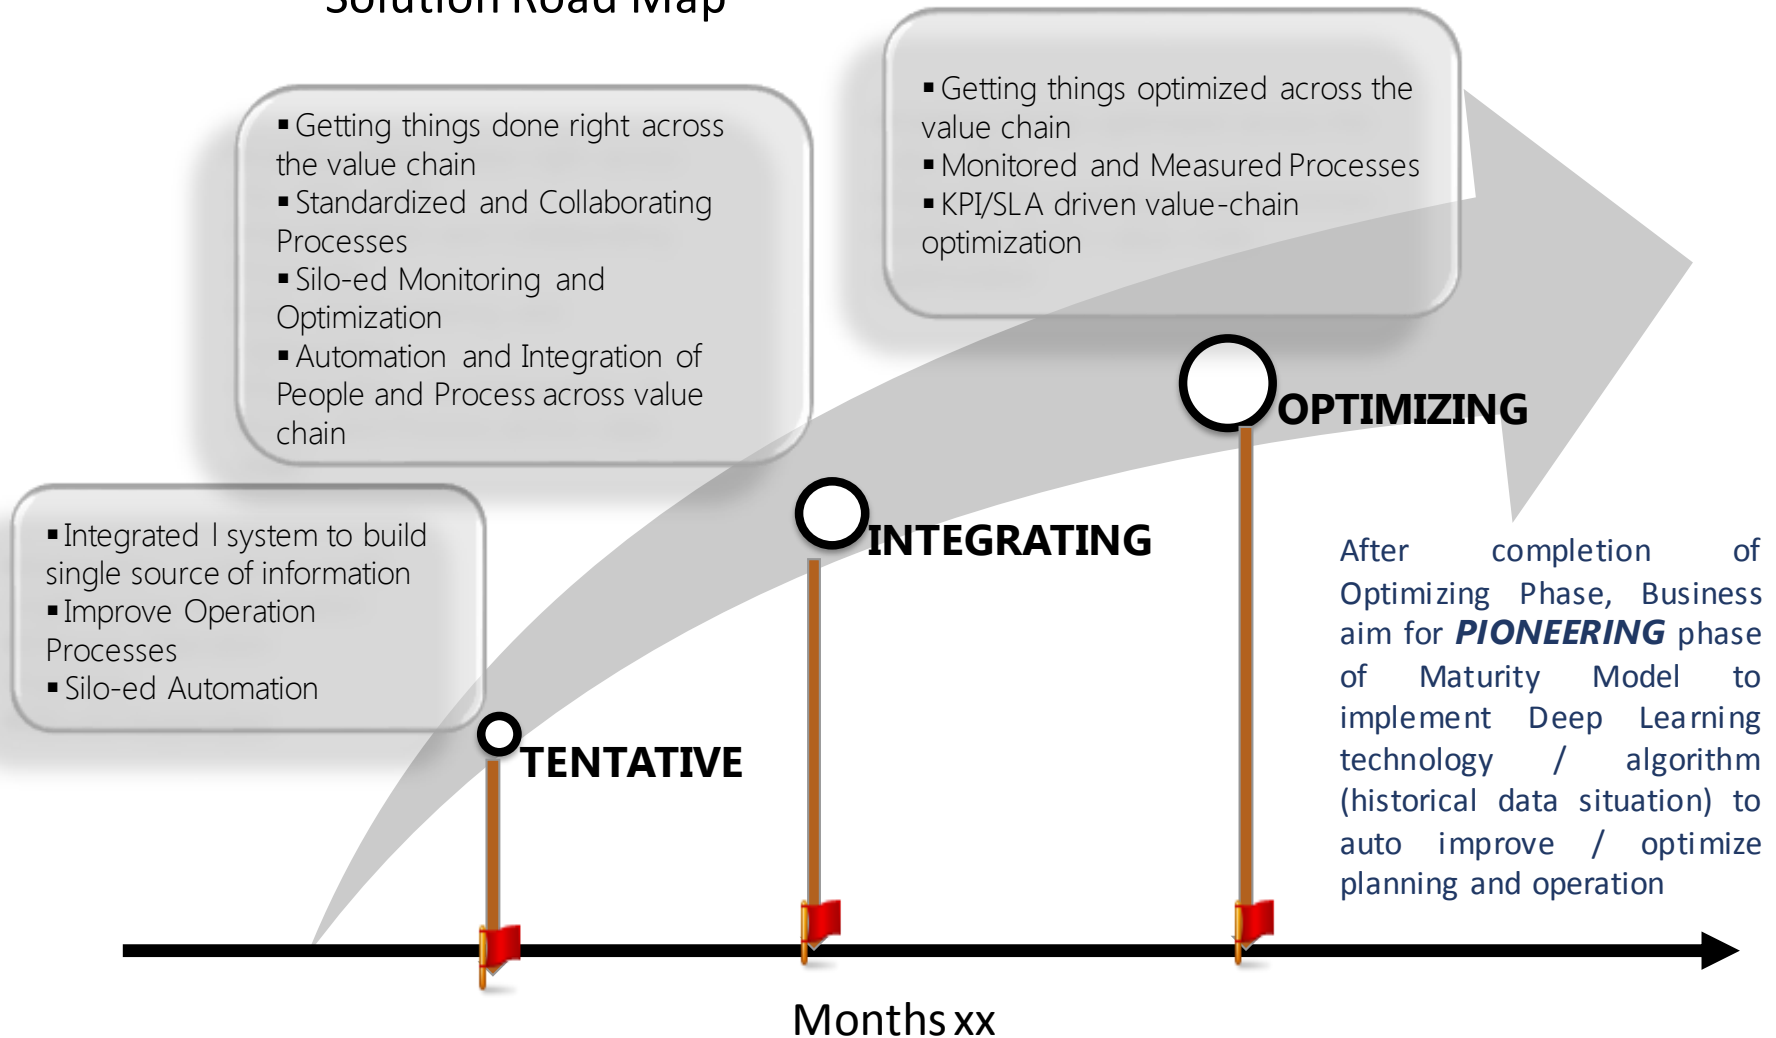

Development of Platform proposed the three phases keeping business priority in consideration

- **TENTATIVE** - Integrated I system to build single source of information , Improve Operation Processes, Silo-ed Automation
- **INTEGRATING** - Getting things done right across the value chain, Standardized and Collaborating Processes, Silo-ed Monitoring and Optimization , Automation and Integration of People and Process across value chain
- **OPTIMIZING** - Getting things optimized across the value chain, Monitored and Measured Processes, KPI/SLA driven value-chain optimization

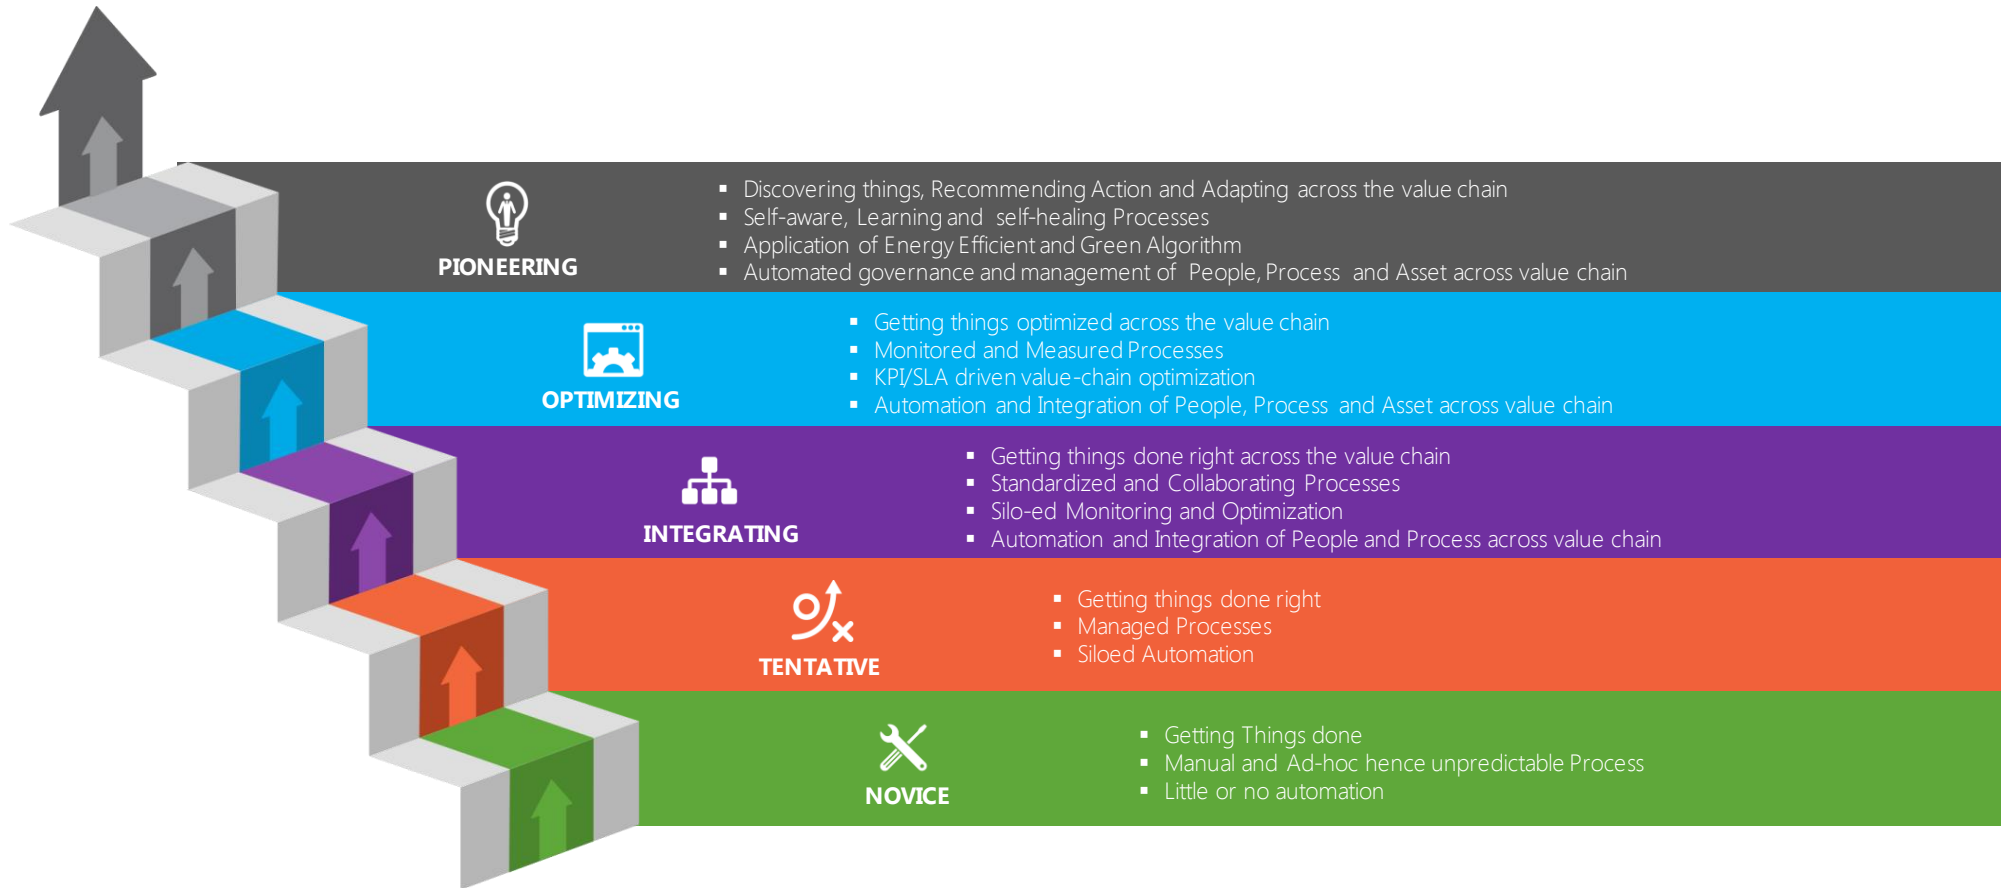

Solution Objective

- Single Source of Truth
 - Single source of Information for operation and all inland terminal locations
 - Capability to multiple cargo and grade
 - Multi tenancy Capabilities
 - Introduced integration capabilities in all IT system
- Improve Operational Control and Supervision
 - Near Real time central monitoring view of loading and off-loading operation on Rail and Truck
 - Capture Gate Weighbridge / Loader / Motion Bridge activities and monitor
 - Automation of multiple workflows with support of Mobile devices
- Advance Planning and Automation
 - Introduce Auto Gate features
 - Advance Planning to Truck / wagon movement, Loading / off-loading of wagon and trucks, customer stock piles
- Introduce Digital Platform for Stakeholder integration
 - Single window to manage information with all stakeholders
 - Avoid Manual management of customer and operational data
- Self Service Platform for Data Analysis and Reporting
 - Introduce self service platform to improve reporting and data analysis

Solution Road Map

Smart Terminal Maturity Model

Solution Realization : Stock Reconciliation Event – Example

Event - Receives Cargo By Truck

Truck Arrival

Weigh Truck
Full

Truck Off-load

Weigh Truck
Empty

Truck Departure

Stock
Available

Event – Delivery Cargo by Train

Train Arrival

Weigh Wagon
Empty

Inspection Check

Load Wagon

Weigh Wagon
Full

Train
Departure

Stock
Available

Monitoring

Truck Turn
Around Time

Wagon
Loading
Status

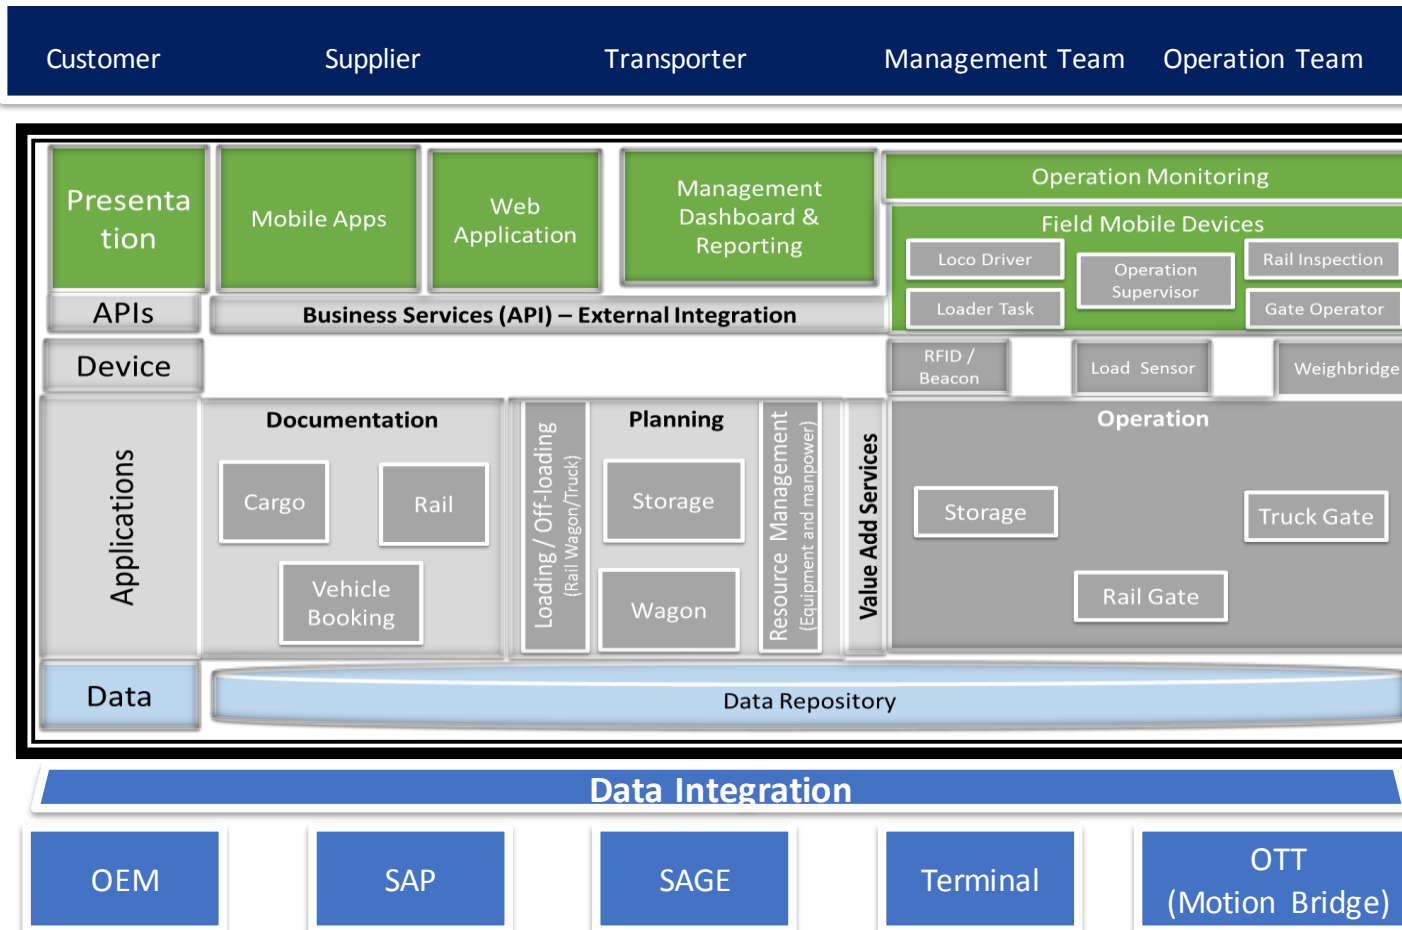

Wagon
Loading
Status

Stock in hand

Train Turn
Around Time

Exception
-Overload / Underloaded wagon
-Missing Wagon detail

Target Proposed Solution

- Integrated solution for all stakeholders (internal / external)
- Enable Data integration with the other applications
- Deployed on Cloud
- Provide API, Web Application and Mobile Apps for external stockholders for information exchange
- Integrate with devices to provide automation at gate and near real time operation monitoring

Solution Component

Documentation

- **Create Order** for cargo by Rail / Truck
- **Delivery Order** for Rail / Trucks
- Truck Pre announcement: Advance information by haulers on Truck arrivals for receipt/delivery of the cargo
- **Rail Registration**: Registers the rail for its each visit to the terminal with wagons details attached to rail
- **Record details** wagons attached to rail and associated cargo mapping

Planning

- **Storage Planning**
 - Profile Definition -Yard definition with Rows and Columns
 - Stock Pile Management
 - Area allocation for incoming cargo on the storage locations
- **Resource Planning** - Planning of equipment and manpower
- **Operation Planning** – For Cargo Loading / Unloading of Rail / Truck for number moves equipment to be performed

Operation

- **Gate Operations**: Truck gate in / Gate Out operations recording for cargo, Assign stock pile location
- **Gate pass** to loader mapping
- Print gate pass with assigned stock pile
- **Truck Loading / Unloading** Operations Recording
- **Rail Operations** Recording
 - Rail Arrival / Departure Recording
 - Exchange Yard Operations (In /Out) - For handing over Rail from Railways to Terminal or vice versa
 - Drawn Out - Draw wagons to exchange yard
- **Mobile Applications for Truck/ Rail Operations and auto gate**
- **Hold and Release** of cargo recording
- Operation Monitoring – Gate/ Cargo/Storage
- **Order Closure** For reconciliation of received quantity against requested quantity
- **Interfaces** with various devices for receiving data, EAM and Invoice system

Value Add Services

- Rail wagon cleaning services, General Cargo services and miscellaneous services
- Cargo shifting services
- Wagon Cleaning Service - Invoked by Weight Validation
